Hi Mattias,

To answer your question regarding workload for the SEA of the latest Danish offshore wind tender 5 FTEs (for a 2-year period) was allocated, which also covered the coordination of publishing preliminary investigations results (contracted by Energinet).

In regards to the open door scheme since 2014, only **28 MW** has been fully commissioned (Nisum Bredning, 2017).

Otherwise, the DEA has issued constructions permits to:

- Frederikshavn Offshore Wind Farm (72 MW) by 26-Oct 2022 but the permit has not yet been utilized.
- Aflandshage Offshore Wind Farm (247-286 MW) by 11-nov 2022, but lost an appeal-case, which remitted the decision to a new administrative ruling on the construction permit. This is still unresolved.

Further, the DEA expects to issue two construction permits before the end of 2024 for:

- Lillebælt Syd (165 MW)
- Jammerland Bugt (240 MW)

I hope this answers your enquiry. Let me know if it leads to further questions.

Med venlig hilsen / Best regards

Dear Christine and Anders,

Do you know if there is information available on how much capacity that has been deployed within the Open Door system between 2014 and 2023?

Or, who I should ask?

Many thanks,
Mattias

2,5 years (approximately) – but there will also be a need (5 appx.) in year 3 and 4 for second year environmental surveys and EIA.

Ämne: SV: Workload of SEAs

Hi Mattias,

The 10 FTE are assigned to prepare, publish and deliver the preliminary investigation output (MetOcean, geophysics and geotechnical outputs, environmental surveys, EIA of facilities on land connected to the OWF) – in the Danish case, it has been Energinet (TSO).

For a full overview of the preliminary investigations please see <https://ddei5-0-ctp.trendmicro.com:443/wis/clicktime/v1/query?url=https%3a%2f%2fens.dk%2fen%2four%2dresponsibilities%2foffshore%2dwind%2dpower%2fongoing%2doffshore%2dwind%2dtenders%2fpreliminary%2dinvestigations%2dowf&umid=1A146519-26C9-DC06-95B6-895DD3CA6D96&auth=b32f7072cb1370b7b119b85843019516260d8fac-7985a4e37a4ecfa054778e1cf51b9821e09f25d9>

The costs for the FTE and the deliveries are afterwards paid by the winner of the tender.

10 FTEs for...?

Från: Anders Møller Jørgensen <anmj@ens.dk>

Ämne: SV: Workload of SEAs

No problem. I'll provide you with both FTEs.

It is correct that Energinet are carrying out the preliminary investigations in DK due to historical reasons – nonetheless whoever contracts the deliverables have a substantial workload (+10 FTE), which need to be factored in if de-risking is preferred.

Hi Mattias,

It very much depends on your tender scheme. The question is how much de-risking the government are to provide the bidders prior tender-deadline?

Especially in regards to preliminary investigations of the site, ensuring off-take possibilities through grid-agreements with the TSO and EIA-licensing of onshore facilities (cables and intermediary stations until Point of Connection). This is a quite substantial workload if preferred. In DK the preferred work-package has been coordinated with potential bidders through ongoing market dialogues.

Would you say that the tender work that Joachim and his colleagues perform, and our work with the SEA, covers more or less all the preparatory work for a tender? Or am I missing some significant work load?

Dear Christine,

Thank you for arranging the meeting with Joachim. It was very helpful.

I am now assessing the workload it would mean for Sweden to transition to a Danish tendering system.

Joachim has provided me with workload estimates for preparing the tenders, such as the tender and contract work and the seabed investigations.

I realised that the work would probably also include work with the strategic environment assessments.

Are you the right person to help me assess the workload of the SEAs?

I'm also considering that there might be additional work, that I have not realised.

Who at DEA do you think has the best such overview? Could it be Stig Uffe Pedersen, who I met in Hamburg?

Most kindly,
Mattias
